Challenge

The Federal Virtual World Challenge is an event led by the U.S. Army Research, Development and Engineering Command, Simulation and Training Technology Center. This event is being conducted in order to reach a global development community to provide innovative and interactive training and analysis solutions in virtual worlds. The event criterion is intentionally unbounded to allow for creative solutions. This challenge is intended to explore the possibilities for using virtual worlds that have not, and may not have, ever been considered by the Government.

The inaugural event is being conducted in 2009 with the winners being announced during March 2010 *Defense Users' Game Tech Conference* in Orlando, Florida. The deadline for submittals is November 15, 2009. Entries will be sorted into logical categories upon receipt. The Federal Government evaluation period will run through January with a public feedback period running through February.

Description

The focus of the challenge is training or analysis capabilities conducted wholly in a virtual environment. The audience includes all United States Government Departments and Agencies, including (but not limited to) Department of Defense (DoD), Department of Homeland Security (DHS), Department of Transportation (DOT), National Aeronautics and Space Administration (NASA) and Department of Health and Human Services (HHS).

The Challenge is open to all contestants. Contestants 18 and under must get written parental consent (for a consent form email

Virtual Patients and Worlds

Desktop computers allow multiple participants to interact simultaneously with the same patient in a common "virtual world". The virtual world is typically presented as a 2D perspective world. Each participant has an "avatar" that represents them in the virtual world. Your avatar can interact with the other participants, who may take on different clinical roles in the clinical world that is created.
